EXPERIENCE

OHSRank

<https://ohsrank.web.app/>

- Developed an innovative webapp, which provides statistics and makes predictions for various Oregon High School sports.
- Implemented backend in Node.js – a multi-level pipeline, which collects data from official database using API, analyzes the data, calculates statistics, and makes statistical predictions using Poisson Distribution.
- Webapp is hosted on Firebase; Google Cloud Functions are used to manage user requests and access data on MongoDB Atlas.
- Designed front end using React.js and Material UI.
- Stack: Node.js, MongoDB, Firebase, React.js, Redux

StopSpot

<https://github.com/gmillia/StopSpotDataPipeline>

- Analytical pipeline for a local bus company. University capstone project, working on a team of 8 for ~6 months.
- Participated in Agile Software Development, where helped produce and execute model development plans.
- Responsible for developing and optimizing analyzers(flaggers), which automated data processing.

- Developed unit testing for flaggers, as well as end-to-end automated testing for the pipeline.
- Involved in designing and implementing notification system for the user.
- *Stack*: Python, PostgreSQL, Docker.
